

POSITION

You are a professor of human-centred technology at the Technical University of Solte in a small country. While some of the best skilled researchers and engineers work in your department, you still face the challenge of limited funding for your research. You are competing with universities in Lauze and Bria in the race to develop quantum computing but are considered worldwide as leader when it comes to human-centered technology development which includes ethical considerations and prioritizes responsible innovation that benefits humanity.

CONFLICT

Conflict with governments of Solte, Bria, Lauze and Wakke (in particular with Medormar Corp and the Chief Executive of Bria Intellectual Property Office):

You advocate for democratizing quantum technologies and strongly oppose the use of new technologies by states, billionaires and industry for profit only. You believe that no agreement will manage to avert the potential risks posed by quantum.
