

The complete

development environment

IRIS Explorer is the state-of-the-art, interactive 3D application development system for all your visualisation needs.

Enabling simple and complex, multi-dimensional datasets to be easily accessed, manipulated, visualised and animated, IRIS Explorer gives you greater insight into your data, delivering intelligent decisions faster.

Using this powerful, intuitive software is easy. By simply selecting building blocks and connecting them together using IRIS Explorer's point-and-click interface, you can rapidly design and customise visualisation applications without writing a single line of code.

People

On 26 March, President of the People's Republic of China **Jiang Zemin** (second from right) and Swiss President **Ruth Dreifuss** (third from right) visited the L3 experiment at CERN. With them were CERN director-general Luciano Maiani (second from left), L3 spokesman and 1976 Nobel prizewinner Sam Ting (right) and L3 physicist and Geneva University rector Maurice Bourquin (left). In 1985, Jiang Zemin, as Mayor of Shanghai, played a key role in organizing the production of BGO crystals at the Shanghai Institute of Ceramics. The crystals are a major part of the L3 experiment.

Indian Atomic Energy Commission Chairman **R Chidambaram** (second from right) visited CERN on 17 March, accompanied by (left to right) **Atul Gurtu** and **Vemuri Narasimham** of Bombay's Tata Institute for Fundamental Research. He saw the progress of Indian contributions for the LHC machine and for the CMS experiment, where his host was CMS co-spokesman **Jim Virdee** (right).
