**Physics at HERA**

by T. DOYLE / University of Glasgow, Scotland

Selected highlights from the HERA experimental programme are presented.

The talks focus on the measurement of structure functions and their interpretation by the H1 and ZEUS experiments. Measurements of spin structure functions from the HERMES experiment and elsewhere are also introduced.

Results from the analysis of diffractive and general hadronic final states in Deep Inelastic Scattering (D.I.S.) are reviewed. The analysis of high( $x, Q^2$ ) events and the limits which these events place on physics beyond the Standard Model is discussed.

Emphasis is placed on the underlying principles. Comparisons are made with other D.I.S. experiments as well as LEP and Tevatron results, where appropriate.
