EP SEMINAR

at 11.00 hrs - EF Conference Room
(Bldg. 13-2-005)

"Systematic study of the production of
($K\pi$)⁺ and ($K\bar{K}$)⁺ resonances"

by C. Nef / University of Geneva

Abstract: High statistics data have been taken with a two-arm spectrometer at 10 GeV/c, and are being taken at 50 GeV/c. These data allow the study of the production amplitudes as a function of mass, of momentum-transfer, of energy and of beam polarity.

We present results obtained at 10 GeV/c on: i) high mass $J^P = 3^-$ and 4^+ resonances; ii) production mechanism of the 1^- and 2^+ states, in particular the role of pomeron exchange; and iii) a possible $\delta(1300)$ state under the A_2 .
