Accelerator physics for pedestrians

by M. HINE

The aim of these lectures is to explain, quantitatively but simply, the physics behind some of the important phenomena in accelerators and storage rings which limit performance : non-linearities, wakefield & wall effects, spacecharge, cooling, etc. An elementary knowledge of accelerator theory is assumed.

All secretaries are invited to attend these seminars as are all administrative staff and other interested colleagues.

The presentations will demonstrate office applications on a Macintosh. (The overview of ADP applications will be limited to the usage by non-specialist users)

If you have not received the detailed programme, please contact C. Erich DD-OCS / 8135 / ERICH@CERNVM or M. Robillard / AG. The programme is also available on CERNVM by typing
