ACADEMIC TRAINING

November 9, 10, 11,
16, 17 and 18
11.00
Auditorium

"Data Structures"

by J.J. Duby (IBM - France)

This series of 6 lectures will review the different kinds of data structures dealt with in programming, in an attempt to make important concepts appear and to describe general implementation techniques.

The only prerequisite is a good experience in programming. The attendees might find it helpful to refer to the Proceedings of the 1970 CERN Computing and Data Processing School, pp. 335 to 403.

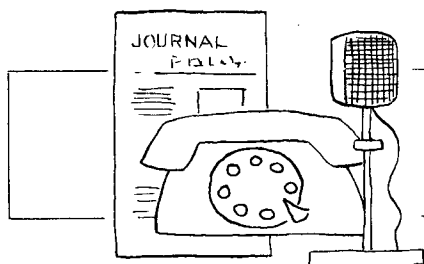

Programme : - Problems related to data structures
- String structures
- Hash-coding
- List structures
- Graph structures

TO ALL READERS OF
THE CENTRAL LIBRARY

Due to an extension of the Central Library Reading Room, a certain amount of moving has to be done.

We are sorry for the inconvenience, and we shall try to keep it to a minimum.

The main feature of the new reading room arrangement will be the transfer of all bound periodicals to the extension area.

Please ask the reading room librarian for any advice you may need in locating material during the move.
