Standard Model Electroweak Precision Measurements with two Z bosons and two jets in ATLAS.

A Dissertation

Presented to

The Faculty of the Graduate School of Arts and Sciences
Brandeis University

Department of Physics

Professor Gabriella Sciolla, Advisor

In Partial Fulfillment
of the Requirements for the Degree
Doctor of Philosophy

by
Prajita Bhattarai

May 2023

This dissertation, directed and approved by Prajita Bhattarai's Committee, has been accepted and approved by the Faculty of Brandeis University in partial fulfillment of the requirements for the degree of:

DOCTOR OF PHILOSOPHY

Wendy Cadge, Dean
Graduate School of Arts and Sciences

Dissertation Committee:
Professor Gabriella Sciolla, Department of Physics, Brandeis University
Professor Aram Apyan, Department of Physics, Brandeis University
Dr. Alessandro Tricoli, Brookhaven National Laboratory

ABSTRACT

Standard Model Electroweak Precision Measurements with two Z bosons and two jets in ATLAS.

A dissertation presented to the Faculty of the
Graduate School of Arts and Sciences of Brandeis University
Waltham, Massachusetts

By Prajita Bhattarai

Abstract iv

List of Tables viii

List of Figures x

List of Abbreviations xvi

I Introduction 1

II Theory 2

1 The Standard Model 3

1.1 Symmetries 3

1.2 Particles and Fields 5

1.3 Theoretical Formulation of the Standard Model 7

2 Limitations of the Standard Model 18

3 Phenomenology of Proton-Proton Collisions 19

4 Electroweak Diboson Physics 23

III Experimental Setup 27

5 The Large Hadron Collider 28

6 ATLAS Detector 31

6.1 ATLAS Coordinate System 31

6.2 Inner Detector 33

6.3 Calorimeters 34

6.4 Muon Spectrometer 36

7 Physics Object Reconstruction 39

7.1 Trigger . . . 40
7.2 Tracks and Vertices Reconstruction . . . 40
7.3 Electron Reconstruction . . . 44
7.4 Muon Reconstruction . . . 46
7.5 Jet Reconstruction . . . 48
8 Future Upgrades . . . 52
8.1 High Luminosity LHC . . . 52
8.2 ATLAS Upgrades . . . 53

IV Analysis Overview 55

9 Goals . . . 55
10 Phase Space Definition . . . 56
10.1 Fiducial Volume . . . 56
10.2 Signal Region . . . 58
11 Reconstruction Selection . . . 59
11.1 Electrons . . . 59
11.2 Muons . . . 59
11.3 Jets . . . 60
11.4 Overlap Removal . . . 61
12 Trigger . . . 62
13 Event Selection . . . 65
14 Datasets and Monte Carlo Simulation . . . 68
14.1 LHC Dataset . . . 68
14.2 Monte Carlo Samples . . . 69
14.3 Event Weights . . . 73
15 Definition of Measured Observables . . . 75

V Analysis Strategy 77

16 Background Estimation . . . 77

16.1 Data Driven Estimate of Fake Background . . . 77

17 Unfolding . . . 100

17.1 Method Overview . . . 100

17.2 Binning for Unfolding . . . 103

17.3 Method Validation . . . 103

17.4 Bias and Optimization . . . 107

18 Uncertainties on the Measurement . . . 110

18.1 Theoretical Uncertainties . . . 110

18.2 Experimental Uncertainties . . . 112

18.3 Unfolding Uncertainties . . . 115

18.4 Background Uncertainties . . . 115

18.5 Breakdown of the Systematic Uncertainties . . . 116

18.6 Statistical Uncertainties . . . 118

VI Results 120

19 Differential Cross-sections . . . 120

20 Effective Field Theory ReInterpretation . . . 120

VII Conclusion 121
