Seminars

Tuesday, 5 September

16.30

Main Auditorium / CERN

"A precise test of time reversal invariance
in β - decay"

E. Commins / Berkeley

WEDNESDAY, 6 September

16.30

Main Auditorium / CERN

*COLLOQUIUM

"How We Think the Brain Thinks"

W. Grey Walter / Burden Neurological
Institute, Bristol

Please note the date of this Colloquium

Abstract : Computer analysis of electrical responses in the human brain during learning has disclosed sustained potential changes associated with Attention, Intention, Expectancy and Decision. From these studies have evolved working hypotheses of how brain mechanisms are related to thinking.

* The CERN COLLOQUIA frequently cover questions outside the field of high-energy physics; the talks are given in English by leading experts. Sometimes the topic may also attract non-physicists. Therefore, the Colloquia are, in principle, open to everyone who is interested, including people from outside CERN (e.g. members of families and/or friends of CERN staff).
