

So why not take your next career step and join us?

TAKE PART! cern.ch/career

We're not just world-famous for science. To conduct experiments of this scale and importance, we need the very best talent in every part of our organization. Which means, if you're interested in joining our Technical or Support teams or if you're an engineer or professional in any area from mechanics to accounting, this is more than an opportunity to develop your career: it's an opportunity to develop knowledge and science on a global scale. In fact, it's an opportunity like nowhere else on Earth.

It is a common misconception that CERN only hires physicists and engineers but did you actually know that of the 2500 or-so staff members at CERN, only 3% are research physicists? The rest is a combination of technicians & engineers in a diversity of fields and a variety of support functions in the following categories:

- Civil engineering
- Electronics
- Mechanics
- Electromechanics
- Information technologies
- Materials science and surface engineering
- Electricity
- Controls and data acquisition
- Health, safety and environment
- Support & Administration

All our positions are based at CERN in Geneva, Switzerland, where you will experience a high quality of life.
