Members of the personnel shall be deemed to have taken note of the news under this heading

COMMISSION PARITAIRE CONSULTATIVE DES RECOURS

La Commission Paritaire Consultative des Recours s'est réunie pour examiner l'appel introduit par Monsieur Bernard PIRE/TH, à propos de l'application des dispositions relatives au non cumul des prestations.

La Commission a terminé ses travaux et a soumis ses recommandations au Directeur général. Conformément à l'Article R VI 1.10 du Règlement du Personnel, ces recommandations et les décisions définitives du Directeur général sont à porter à la connaissance du personnel.

Pour ce faire, ces documents seront affichés aux tableaux du Bâtiment de l'Administration du 10 au 31 août 1984 inclus.

JOINT ADVISORY APPEALS BOARD

A meeting of the Joint Advisory Appeals Board has been held to examine the appeal lodged by Mr. Bernard PIRE/TH regarding the application of the regulations concerning non-concurrence of benefits.

The Board has completed its study and submitted its recommendations to the Director-General. Article R VI 1.10 of the Staff Regulations specifies that these recommendations and the final decisions of the Director-General must be brought to the notice of the personnel.

The relevant documents will therefore be posted on the notice boards of the Administration Building from 10 to 31 August 1984 included.

Monday 13 August

EP SEMINAR

at 17.00 hrs – Auditorium

Laser spectroscopy at ISOLDE :

The study of nuclear properties far off stability

by K. WENDT / University of Mainz and CERN-EP

The method of collinear fast beam-laser spectroscopy, using directly beams of radioactive isotopes from on-line mass separators such as ISOLDE at CERN, has dramatically extended the possibilities to study nuclear moments, radii and deformations over long chains of short lived isotopes with lifetimes down to the second range. In this way our knowledge about nuclear behaviour has been extended deep into the region of α - and β -instability, giving stringent tests for nuclear models. The atomic physics problems, involved in the extraction of the nuclear quantities from the experimental data, will be briefly reviewed, while the discussion will focus on some recent results for nuclei in the rare earth and radium region.

Tuesday 14 August

CERN PARTICLE PHYSICS SEMINAR

at 16.30 hrs – Auditorium *

Possible left-right symmetry and β^+ decay

by D. ATKINSON / University of Groningen

The extension of the standard electroweak theory to the reflection-symmetric $SU(2)_L \times SU(2)_R \times U(1)$ group necessarily involves a right-handed, as well as a left-handed charged current. A relative measurement of Fermi and Gamow-Teller decay positron polarizations to an accuracy of 10^{-3} is presently being performed in Groningen and Amsterdam. The theoretical background, including a discussion of radiative and nuclear corrections, will be presented.

*) Tea and coffee will be provided at 16.00 hrs.

Wednesday 15 August

THEORETICAL SEMINAR

at 14.00 hrs - Theory Conference Room

Observable signals of the idea of family-replication through preons

by J.C. PATI / Trieste

Thursday 16 August

CERN PARTICLE PHYSICS SEMINAR

at 16.30 hrs – Auditorium *

**Heavy neutral leptons and new gauge bosons :
Some experimental prospects for the rest of the '80's**

by J. ROSNER / University of Chicago

Unanswered questions in the standard $SU(2) \times U(1)$ electroweak picture include the existence of right-handed
